PRESS RELEASE

Exacq Technologies Announces Integration with PlateSmart
New PlateSmart integration combines exacqVision video surveillance software with license plate recognition software

(INDIANAPOLIS)—Exacq Technologies, a leading manufacturer of video management system (VMS) software and servers used for video surveillance, has announced a new integration with PlateSmart Technologies, a license plate recognition (LPR) software-only solution.

The PlateSmart software can be easily integrated into any exacqVision system. Operating on a Microsoft Windows platform, the PlateSmart software is compatible with a variety of analog and IP security cameras. Once the PlateSmart software is connected to the camera and exacqVision system, it continually searches for license plates. The recognized license plate goes through the analytics and the metadata is sent to the exacqVision server. The plate information is then displayed in the exacqVision client software and includes the following data:

- License plate number
- Timestamp of when the license plate was captured
- Camera name
- State
- Longitude and latitude
- Path to the image

"PlateSmart is a great strategic partner for our video management system," notes Tom Buckley, vice president of sales and marketing, Exacq Technologies. "As demand continues to increase for license plate recognition, it's important that we make this powerful technology directly available from our client user interface."

This new PlateSmart integration is available for integration with exacqVision systems within the United States. It provides exacqVision end users with a seamless addition of an LPR solution to their existing video security system.

"We are very excited to have Exacq Technologies as a VMS integration partner," said John Chigos, PlateSmart founder and CEO. "Exacq is an industry leader in VMS technology, and PlateSmart is on the cutting edge of LPR. We expect great things from our work together."

For more information on this exacqVision integration and other new updates and offerings, go to www.exacq.com.

About Exacq
Exacq Technologies (www.exacq.com) designs and manufactures the cross-platform, open-architecture exacqVision video management system (VMS) used in the physical security industry for IP video surveillance. exacqVision is available on factory-installed hybrid and IP camera servers or on commercial off-the-shelf servers. It can also be installed directly on compatible IP cameras, eliminating the need for a separate server. Video from exacqVision servers can be accessed with the free, cross-platform (Windows/Linux/Mac) client, most web browsers and via the free exacq Mobile app available for iPhone, iPad and Android devices. Exacq's products are available throughout the world via authorized resellers and distributors.

About PlateSmart

PlateSmart® is manufactured exclusively by Cyclops Technologies, Inc., a privately owned company located in Oldsmar, Florida that was incorporated in 2004. PlateSmart® is the world's first software-only License Plate Recognition solution. The company's staff consists of mathematicians, video engineers, attorneys, software developers, IT specialists, and former law enforcement personnel.
